

**Amendments to the Specification:**

Please add the following new heading and paragraph before "DETAILED DESCRIPTION OF THE INVENTION," at page 5, line 17:

**BRIEF DESCRIPTION OF THE DRAWINGS**

Figure 1 shows a flow through substrate monolith in accordance with the present invention.

Figure 2 shows a longitudinal cross-sectional view of the flow through substrate monolith of Figure 1.

Please replace the paragraph, beginning at page 7, lines 18 - 23, with the following rewritten paragraph:

The catalytic converter can comprise a conventional substrate, such as a ceramic, e.g. cordierite, or metal, e.g. Fecralloy™, flow through honeycomb. Alternatively, the first substrate, where present, the second substrate or the first and second substrates comprise a particulate filter, wherein where the first and second substrates are different, the non-filter substrate can be e.g. a flow through honeycomb substrate. Figures 1 and 2 show an exemplary flow through, non-filtered substrate monolith, including flow arrows to show the direction of gaseous flow. The catalyst can be coated on a downstream end of a filter if desired.
